RECOMENDACIONES PARA SU INSTALACION

- Instalar la bomba al automovil y conectar adecuadamente las nuevas mangueras de presión y las de distribución de aceite.
- Con el motor apagado cambie por completo el aceite en el sistema hidráulico.
- Levante la parte delantera del automovil y asegúrese que las llantas estén libres y que no toquen el suelo.
- Encienda el motor y déjelo trabajar sin acelerar, durante 10 min. (escuchara un ruido) esto es normal ya que la bomba se esta purgando.
- Apague el motor y verifique el nivel de aceite de la dirección, rellene si es necesario.
- Nuevamente encienda el motor y acelere a 1500 rpm, gire el volante de derecha a izquierda, apague el motor y verifique el nivel de aceite.
- Repita el paso anterior hasta que deje de haber espuma en el aceite y que el nivel de aceite no baje.
- Baje la parte delantera del automovil y haga una prueba de camino.
